

As the fleet administrator of a large organization, how do you...

Locate Vehicles in Your Fleet

You are discovering in your periodic inventory checks that as many as five percent of the vehicles in your fleet are nowhere to be found. These vehicles are either missing or simply misplaced. Locating them has been labor-intensive and time-consuming. You need a more cost-effective way to manage your fleet inventory.

Oversee Vehicle Maintenance

The difficulty of monitoring vehicle maintenance has resulted in unexpectedly high repair costs, e.g., complete engine overhaul in certain cases. You have realized that vehicle maintenance can be better planned if only vehicle mileage estimates are more easily accessible. You need a more efficient way of maintaining consistent mileage records for vehicles throughout your fleet.

Ensure Safe Driving Speed

Vehicle operators with excessive speeding habits have triggered repeated complaints. You realize that these are not just isolated incidents but "accidents waiting to happen." You want to protect your company from potentially damaging liabilities. You need both verification and early notification of excessive speeds so you can take preventive actions to reduce the likelihood of accidents.

Manage your business critical fleet assets

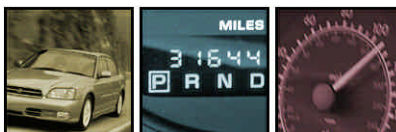

Greater Control Through Better Information

Enterprise SmartFleet offers state-of-the-art onboard wireless GPS units that can be easily upfitted to vehicles in your fleet. These are intelligent mobile devices that can help solve your day-to-day fleet management problems.

Enterprise SmartFleet is the only available solution today designed to give you greater control over your company's business critical fleet assets, right at your desk. Whether rain or shine, you can count on Enterprise SmartFleet to be always at your command to help you take care of business.

Simplicity and Ease of Use

Accessible from any standard web browser, Enterprise SmartFleet is intuitively simple and easy to use. Whether you are administering a few hundred or a few thousand vehicles, Enterprise SmartFleet can help simplify the everyday management of your company's business critical fleet assets.

Deliver results that improve the bottom line

Better Inventory Management

Automated fleet inventory reports detailing vehicle locations with mileage and run time summaries are generated on a daily or weekly basis and made accessible to fleet administrators over the web. Fleet administrators can perform fleet inventory management functions on demand and make informed business decisions expeditiously.

Better Asset Management and Reduced Repair Costs

Vehicle maintenance profiles created from remotely captured vehicle mileage and engine run time data is a time saver that can automate vehicle maintenance scheduling. The result? Increased vehicle disposal value at the end of lease and reduced repair costs.

Better Risk Management and Reduced Insurance Rates

Notifications on excessive speeding help fleet administrators monitor what is happening in the field. Company can better manage risks and reduce liability by addressing such safety issues before incidents could happen. Such preventive measures result in substantial savings on insurance rates over time.

"A powerful corporate fleet management solution designed to give fleet administrators greater control over business critical fleet assets."

Best wireless GPS coverage for North America

Enterprise SmartFleet is built with proven wireless GPS technologies that are extremely cost-effective. What's more, Enterprise SmartFleet is capable of supporting any open standards in wireless connectivity through mobile devices ranging from smart phones to PDAs.

Enterprise SmartFleet today provides the best coverage available for North America, i.e., over 99% of the U.S. population and 100% of the population of Canada.

Enterprise SmartFleet helps you take care of business.
